

Work is devoted to the study of phenological rhythm and seed breeding six species Heuchera L. It is shown that the highest percentage of germination was observed in *H. pubescens*, *H. rubescens* – by 80% and *H. villosa* – 70%, the lowest – in *H. chlorantha* – 6%. The positive responsiveness *H. chlorantha*, *H. parvifolia*, *H. pubescens*, *H. villosa* processing plant growth regulators.
