

Emergence of seeds of decorative species of *Salvia* L. genus. Popular decorative annual plants as *S. splendens*, *S. coccinea*, *S. farinacea*, *S. viridis* are grown at the Saratov Botanical Garden's collection since 2001 year. The dates that are used for the characterization of the quality of seeds are: germination capacity, energy of growth, the speed of emergence, also the strength, swelling and emergence of seeds. That are depends on the kind of species. Germinate's development goes rapidly after 4 days.
